Machining
CATIA - Designer & Advanced Machinist 2
Configuration (AM2)

CATIA V5R21
Configuration overview

CATIA - Designer & Advanced Machinist 2 Configuration (AM2) enables aerospace companies to uniquely manage the structural parts design-to-manufacturing process. AM2 delivers, within the single CATIA V5 environment, powerful mechanical and surfacic design tools as well as advanced 2.5 to 5 axis program definition tools to manufacture high quality complex parts. What makes AM2 unique is the upfront integrated material removal simulation capability with advanced part analysis in that single CATIA V5 environment. AM2 is thus the ideal solution to free aerospace companies (from OEMs to co and subcontractors) from an heterogeneous environment. These companies can therefore better than ever manage design changes and enrich their concurrent engineering and manufacturing methodologies.

CATIA - Knowledge Expert
Ensure the consistency and quality of designers’ work using corporate standard rules bases created with CATIA - Knowledge Expert 2 (KWE).

Product overview
CATIA - Knowledge Expert 1 (KE1) allows designers to import and use corporate knowledge stored in rule bases created using CATIA - Knowledge Expert 2 (KWE). Thus design compliance is ensured with established standards. These rule bases automate knowledge processes such as:

- best practices,
- application processes, and,
- design validation and corrections. The reports generated provide better identification of standards violations and help to implement necessary corrections. As an integrated product, CATIA - Knowledge Expert 1 (KE1) can be used in conjunction with all other Version 5 products to share process applications throughout the enterprise. The Knowledge Expert solution consists of a buildtime product, CATIA - Knowledge Expert 2 (KWE), and a runtime solution, CATIA - Knowledge Expert 1 (KE1).

Real Time Rendering
Enable designers to leverage technological material specifications to produce realistic renderings of their model.

Product overview
Real Time Rendering (RT1) Enables designers to leverage technological material specifications to produce realistic renderings of their model. Texture can be created from scratch, modified from imported digital images, or selected from the included library. Associativity is maintained between the material library and the material applied to the parts. Materials can be applied through a specification-driven approach or through simple selection. Real-time display computations quickly convert models to realistic renderings.
CATIA - Assembly Design
Easily define mechanical assembly constraints, automatically position parts and check assembly consistency.

Product overview
CATIA - Assembly Design 2 (ASD) offers a new generation CATIA P2 product for managing assemblies. Assembly Design products integrate with other CATIA Version 5 applications like part design and drawing generation. CATIA - Assembly Design 2 (ASD) establishes mechanical assembly constraints using mouse movements or graphical commands to easily snap parts into position. Assembly Design 2 helps designers managing large, hierarchical assemblies of CATIA V4, V5, VRML or STEP parts using a top-down or bottom-up approach. Parts and sub-assemblies are easily reused in the assembly without data duplication. Productivity tools like automatic exploded view generation, collision and clearance checking. Automated BOM generation greatly reduce time and increase quality. Flexible Sub-Assembly gives user the ability to dynamically unlink product structure and mechanical behavior. This unique command allows to move individual component in the parent assembly or to manage different internal positions of instantiated sub-component. Introducing an intuitive user interface, user interface across NT and UNIX, offering productivity, ease of use, and low training costs.

CATIA - Part Design
Design complex parts with highly productive and robust modeling features in an intuitive environment

Product overview
This CATIA-P2 offers a new generation CATIA product for part design with one interface on NT and UNIX. Interoperates with CATIA Version 4 data and methodologies. The "smart-solid" design kernel combines high productivity feature-based toolsets and boolean methodologies, delivering a flexible solution enabling multiple design approaches. CATIA - Part Design 2 (PDG) can be used with CATIA V5 applications like Assembly Design, Drafting, Wireframe & Surface
Product overview

Generative Drafting for CATIA-P2 is new-generation CATIA products which allows users to automatically generate associative drafting from 3D mechanical designs and assemblies produced with CATIA Version 5. When combined with Interactive Drafting 1, the Generative Drafting product benefits both from integrated 2D interactive functionality and from a higher productive environment for drawings dress-up and annotation. Generative Drafting 2 product offers a flexible and scalable solution to create associative drawings from 3D mechanical designs, surfaces, hybrid parts and assemblies created with CATIA Version 4 or Version 5. 3D dimensions can be automatically generated with control over their placement. Designers are able to add post-generation annotations with standards-based dress-up features. Associativity of the drawings to the 3D master representation enables users to concurrently work on their design and drawings.

Product overview

Interactive Drafting is a new generation CATIA product to address 2D design and drawing production requirements. It offers a highly productive, and intuitive, interactive drafting system. It also enriches Generative Drafting with both integrated 2D interactive functionality and with a productive environment for drawings dress-up and annotation.
CATIA - NC Manufacturing Review
Access, visualize, and browse 3D NC Manufacturing data from CATIA V5 and previous versions.

Product overview
CATIA NC Manufacturing Review 2 (NCG) offers basic NC capabilities such as tool path verification, material removal simulation, remaining material analysis, tool path edition and creation of shopfloor documentation. It provides the infrastructure for all V5 NC programming products and allows NC programmers or machine operators to review V5 part operations. Furthermore, different manufacturing data such as APT files, CL files and ISO code can be imported and reviewed. NCG also allows the reuse of CATIA V4 NCMILL and NCLATHE programs.

CATIA - Advanced Machining
Easily define NC programs dedicated to machining complex 3D parts within a single workbench including nearly all 2.5-axis to 5-axis machining technologies

Product overview
CATIA - Advanced Machining 2 (AMG) easily defines NC programs to machine complex 3D parts (i.e. for aerospace, hydraulics, and turbo machinery) within a single workbench. The product offers machining operations covering milling from 2.5-axis mode up to 5-axis mode as well as axial machining. In addition to the complete set of machining operations offered by other V5 Machining products like CATIA - Prismatic Machining 2 (PMG), CATIA - 3-Axis Surface Machining 2 (SMG) and CATIA - Multi-Axis Machining 2 (MMG); CATIA - Advanced Part Machining 2 introduces multi-axis flank contouring, 5-Axis Helix Machining for Turbo-machinery parts, and advanced multi-axis processes like the unmatched Multi-pocket strategies dedicated to Structural Part Machining.
Product overview

The Next Generation CATIA Solution Version 5 is built on a totally new scalable architecture, which combines the best of the current CATIA technologies with new generation standards. It offers total single system image across Native Windows and UNIX environments, and an extensible environment capable of supporting all aspects of the Digital Enterprise, from Digital Mockup, Digital Manufacturing, to Digital Operation and Digital Plant definition. The Version 5 system architecture offers a unique scalability environment which gives to customers the choice of selecting the optimum set of solutions, given the CAD specialization of the intended users, the complexity of the project and corresponding functional requirements. The 3 possible choices are CATIA-P1, CATIA-P2 and CATIA P3 installations.

CATIA - Object Manager

CATIA - Object Manager 2 (COM) provides a highly scalable and open platform for collaborative product development, which combines the best of the current CATIA technologies with new generation standards.
CATIA - CADAM Interface
Share drafting information between the CATIA-CADAM Drafting and V5 drafting products.

Product overview
The product CATIA - CADAM Interface 1 (CC1) provides the user with an integrated capability to share 2D drafting information between CATIA CADAM Drafting (CCD) and V5 Drafting products.

This integrated capability provides existing CCD users with the flexibility to easily integrate the V5 CATIA product portfolio into their environment, while maintaining their current practices and procedures based on their CCD product use.

CATIA - IGES INTERFACE
CATIA - IGES Interface 1 (IG1) helps users working in a heterogeneous CAD/CAM environment to exchange data through the neutral IGES format.

Product overview
CATIA - IGES Interface (IG1) helps users working in a heterogeneous CAD/CAM environment to exchange data in a neutral format. This utility supports IGES Version 5.3 and provides naming management to map IGES and CATIA identifiers. Users can perform reliable bi-directional 2D and 3D data exchange between dissimilar systems with direct and automated access to IGES files. CATIA - IGES Interface 1 (IG1) can process wire frame geometries, surfaces and trimmed surfaces, conic curves and color.
Product overview

Dassault Systemes has an unprecedented record of accomplishment in delivering upward compatible CATIA Solutions within a version life cycle and across major new versions. Thanks to a unique approach of gradual introduction of Next Generation software components within Version 4, started since V4R1.3, this new product line offers a smooth progression for current users of CATIA Solutions Version 4. Beyond the best of CATIA Version 4 Technologies brought forward in the new generation product line, CATIA - V4 Integration 2 (V4i), which is only part of CATIA-P2 set of solutions, offers numerous integration features which make seamless hybrid installations possible, involving both applications from CATIA Version 4 and applications from CATIA Version 5, while benefiting from data compatibility between the two product lines.

Product overview

CATIA - V4 Integration

CATIA - V4 Integration 1 (V41) helps existing CATIA Version 4 customers take advantage of the advanced technologies of Version 5 while preserving their investment in V4 data.

CATIA - NC Manufacturing Verification

CATIA - NC Manufacturing Verification 2 (NVG) offers advanced tool path verification capabilities for multi-axis positioning as well as for multi-axis machining. It is a complementary product to CATIA - NC Manufacturing Review 2 (NCG). The accuracy of machined parts can be analyzed either by detection and display gouges and remaining material, by pick point analysis or by measuring. Collisions between the tool or tool holder and part or fixtures are detected and graphically visualized. The results of a material removal simulation can be stored in a reporting file.
CATIA - Generative Shape Design
Create in-context, specification-driven shapes based on a combination of wireframes and extensive multiple surface features.

Product overview

CATIA - Generative Shape Design 1 (GS1) helps design mechanical shapes based on a combination of wireframe and multiple surface features. CATIA - Generative Shape Design 1 (GS1) provides an extensive set of tools for creating and modifying mechanical surfaces used in the design of complex shapes or hybrid parts. GS1 brings smart tools, like powercopy to manage the feature reuse. Its feature-based approach offers a productive and intuitive design environment where design methodologies and specifications can be captured and reused.
ABOUT CATIA V5R21

CATIA is Dassault Systemes’ PLM solution for digital product definition and simulation.
